

## Wednesday Challenge Form

Group Members: Raul, Matty, Sofia Monte, Me

Problem Statement: Get a wood block to as close as we could to 2 inches.

Approach: First thing we did was use a ruler And measured out 2 inches. We then cut with a Saw a little bit before the 2 inches. We then Sanded it down to as close as we could to 2 Inches without going under but not having too Much extra. The second time we did the same Thing except we used a more accurate. Ruler Measure 2 inches.

Solution: We got a ruler and measured 2 inches And cut a little bit more than 2 inches then sanded down

Lessons Learned: Try to make the block as level And even as possible. Sand down after you cut Out a little bit more than 2 inches
