Wednesday Challenge Form

Group Members: Evan, Tyler, me

Problem Statement: Estimate how many candy Corn it would take to fill the full sheet of paper

Approach: The first thing we tried was to see How many candy corn fit inside of one square Inch and then multiply that number by however Many square inches there are in the piece of Paper. After we tried a different was by placing Candy corn from one side to the other then the Other way and multiplied the two together. The First try we got 561 and the other was 744 We decided to go with 561 as our final answer.

Solution: We saw how many fit in one square Inch and then multiplied it by the square inches

Lessons Learned: Take a picture of the actual answer To win.
